

Design a Bone Tool

Get inspired by archaeological objects to create your own model bone tool!

Discover Bone Tools

People around the world have been making tools from bones for thousands of years. Bone is a hard and durable material, making it ideal to use for a variety of tools. Some tools are made with bone only, and others are made with several materials. When ancient tools are found in archaeological digs, bone is often the only part left, as other materials decay more quickly

Adze (antler, bone, jade, rawhide),
saw (steel, bone, metal), flint flaker
(bone, copper, rawhide).

Awl (wood, bone), used to string
fish to place them on drying rack.
