

Make a Berry Data Bracelet

Make a bracelet representing berry data from the Winterberry project!

Winterberry is a citizen science project to investigate how shifting seasons affect the availability of berries. Volunteers across Alaska tracked the abundance and condition of four berry species.

Left: Checking berry conditions. *Image: Winterberry.*

Materials Needed: Winterberry Data charts, pony beads (green, red, brown, orange, yellow, and gray), letter beads (V, F, and H), pipe cleaners, scissors.

Instructions:

Step 1: Choose a chart from one of the Winterberry locations. You can pick one, two, or all three! Gather different colors of beads to represent the data, according to the chart.

Unripe: Green

Ripe: Red

Rotten: Brown

Dry: Orange

Rotten or Dry: Yellow

Damaged: Gray

Step 2: Thread your beads on a pipe cleaner. Add a letter bead to label the location you chose.

Step 3: Twist the ends of your pipe cleaner together. Trim the ends with scissors if needed. Wear your berry bracelet! *Caution: Pipe cleaners can be sharp. Be careful not to poke yourself!*

Optional: Twist the ends of two or three bracelets together to wear them as one bracelet.

Winterberry Data Charts

Rosehips () Abundance and Conditions on September 25, 2019

Venetie

John Fredson School

- 8 Red (ripe)
- 2 Brown (rotten)
- 3 Orange (dry)
- 1 Yellow (rotten or dry)
- 2 Gray (damaged)

Fairbanks

Anne Wien Elementary

- 1 Green (unripe)
- 1 Red (ripe)
- 5 Brown (rotten)
- 1 Orange (dry)
- 3 Yellow (rotten or dry)
- 4 Gray (damaged)

Homer

Center for Alaskan Coastal Studies

- 1 Green (unripe)
- 5 Red (ripe)
- 2 Brown (rotten)
- 1 Orange (dry)
- 1 Yellow (rotten or dry)
- 4 Gray (damaged)

Note: Volunteers tracked berries in over 30 communities across Alaska. Data from Venetie, Fairbanks, and Homer are highlighted in this activity.
